BEST PRACTICE FOR PROSTHETIC JOINT INFECTIONS

PROSTHETIC JOINT INFECTIONS UNIT

ABOUT THE PROSTHETIC JOINT INFECTIONS UNIT
This first-of-its-kind service in Gauteng and one of a handful in South Africa was started in October 2021.

The unit focuses specifically on the management of complex prosthetic joint infections and revisions in a dedicated multidisciplinary team setting.

Dr Jacques du Toit has a special interest in managing these complex cases and is a member of the European Bone and Joint Infection Society (EBJIS) and the MusculoSkeletal Infection Society (MSIS).

TEAM OF SPECIALISTS
Our multidisciplinary team of specialists and allied healthcare professionals has several years of experience in their respective fields.

They have joined together to combine their expertise and provide optimal patient care and treatment.

The team consists of – among others – microbiologists, radiologists, physiotherapists, orthotists, physicians, infectious disease specialists, psychologists, pathologists and anaesthetists.

Patients with an infected knee, hip or shoulder replacement are discussed by the various specialists and subspecialists to ensure optimal treatment and results based on consensus among the specialists and internationally accepted patient guidelines and protocols.

MEET OUR MULTIDISCIPLINARY TEAM

Specialist Orthopaedic Surgeon
Dr Jacques du Toit, chairperson of the Prosthetic Joint Infections Unit

GP and Surgical Assistant
